

## HUMIDITY SEPARATORS SF251/S PN 16 and PN 40

### DESCRIPTION

The SF251/S series centrifugal separators remove moisture from steam and compressed air pipelines. Steam and compressed air pass through the separator and, as a result of centrifugal forces, impact and swirling effects, the particles with a heavier specific gravity, such as water and oil droplets, moisture in suspension, dirt and scale are separated from the fluid.

The condensate collected at the bottom of the separator must be automatically drained by a suitable steam or compressed air trap.

### MAIN FEATURES

Several possibilities of installation.  
No moving parts.  
Stainless steel strainer screen included.

**OPTIONS:**            Threaded condensate connection.  
                              Special tailor-made designs.

**USE:**                    Steam, compressed air and other gases .

**AVAILABLE MODELS:**        SF251/S – carbon steel.

**SIZES:**                    1/2" to 4"; DN 15 to DN 100.

**CONNECTIONS:**        Flanged EN 1092-1 PN 16 or PN 40.  
                                  Flanged ASME B16.5 Class 150 or 300 on request.

**INSTALLATION:**        Always with the condensate discharge pointing downwards.  
                                  See IMI – Installation and maintenance instructions.

\* For certified values, consult manufacturer. Volume and weight refer to PN 16 version. Other versions may have slightly different values.

\*\* As standard, in separators manufactured with EN 1092-1 flanges, these connections are female threaded ISO 7 Rp. In models with ASME B16.5 flanges, they are female threaded NPT. Alternatively, EN 1092-1 or ASME B16.5 flanged drain connections can be supplied (ASME on the same class as main connections).

Remarks: The top of the separator is supplied with a threaded connection, which size does not exceed the size of the drain connection. This connection is always supplied with a threaded socket. It can be used for air venting or balance pipe connection.
